

JS

① NodeJS → core of NodeJS + APIs in NodeJS (HTTP module)

② ExpressJS → Everything we did in Node (again with express perspective)

↳ REST APIs

↳ routes

↳ middlewares

↳ cores

↳ project

↳ Login System

Quick Recap:Notes Projects

↳ API (routes, middleware, controllers)

↳ Login/Register Controller

Register → validation of I/p → verify if already a user
uid * 4 → unique ids.

bcrypt → hashing

fs → JS ON

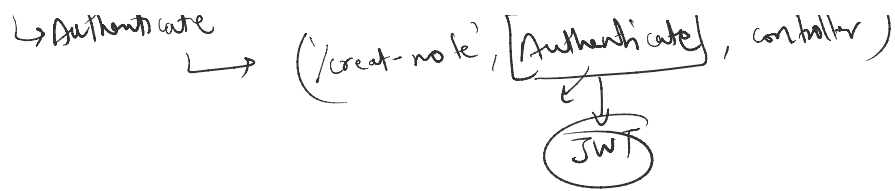

Login → Validation I/p
verify if user is registered

JWT → token → local storage / session storage

→ header

↳ Authentication: Bearer <token>

↳ Authenticate
↳ (/creat-note, Authenticate, controller)

* Role Based Access Control (RBAC)

Authenticate : is user valid (HTTP Code: 401)

Authorization : is user allowed to perform desired operation. (HTTP Code: 403)

* Types of Middlewares

- ① App level middleware } app.use()
- ② Route level middleware } (req, res, next)
- ③ Custom middleware
- ④ 3rd party middleware
- ⑤ Error handling middleware → (err, req, res, next)

* Chat System
